holographic

effect

Sonopress

Example 1

1154 / White opaque - 97,5%
8227 / Red opaque - 2,5%

Example 2

REY 200R T100 / Crystal Clear - 98%
8287 / Red transparent - 1%
8228 / Blue opaque - 1%

Example 3

8227 / Lemon Yellow - 99,75%
8227 / Red opaque - 0,25%

Guidelines

Choose a combination and proportion of colours for your marbled design. Please be aware, that opacity varies, depending on the selected colours. Also every LP is unique. For further information please contact your customer service account manager.

All colours and PMS numbers are for reference only.
We do not guarantee an exact match.

Colour Selection

Splatter

opaque

Sonopress

Example 1

Base – REY200R T100 / Crystal Clear
Splatter 1 – 8722 / Black opaque
Splatter 2 – 8227 / Red opaque

Example 2

Base – 9349 / Pink transparent
Splatter – 1154 / White opaque

Guidelines

Choose a combination and proportion of colours for your splatter design. Please be aware, that opacity varies, depending on the selected colours. Also every LP is unique. For further information please contact your customer service account manager.

All colours and PMS numbers are for reference only.
We do not guarantee an exact match.

LP records with colors employ distinct materials compared to traditional black vinyl, resulting in potential variations in surface noise. This notably pertains to the likelihood of increased noise levels and occasional static sounds (such as clicks) at the lead-in and lead-out grooves and during silent passages of the recording. It's worth noting that colors like gold and silver, due to their metallic particles, can be especially susceptible to interference.

Transparent and exceptionally light shades present a challenge in terms of quality control, as it becomes intricate to detect pressing defects, often rendering them nearly invisible, even when examined under a microscope. For these colours we are unable to entertain claims related to crackling noise or clicks

resulting from minor pressing faults that remain undetectable during visual inspections.

As colored LP records are manufactured using material from different batches, it is common to encounter slight variations in color.

The appearance of LP record colors can vary in hue depending on factors such as lighting conditions, background, opacity, and weight. Colored LP records may exhibit runmarks or subtle hints of other colors, as complete removal of residual granulate from the machines is not always achievable up to 100%.
